

JOIN THE SECBI XDR TECHNOLOGY PARTNERSHIP PROGRAM

Cybersecurity challenges are constantly on the rise, including the ever-expanding attack surface, the evolving stealth of low-and-slow attacks; and security teams drowning in alerts, just to mention a few. Despite numerous solutions, total threat visibility is still elusive; security tools remain in silos, and investigation into devious attacks is primarily a manual process. These drawbacks severely limit a security team's ability to mount effective and timely responses.

Businesses are looking beyond security solutions that address only one attack vector in a single part of the network, because cybercriminals have gone way beyond single-vector hacks. Stealthy attacks target multiple vectors, complicating detection and response. That's why the SecBI XDR platform takes a multi-vector approach, applying a proactive layer of machine learning-based analytics across data ingested from endpoint, network, and cloud security tools. SecBI XDR intelligently unifies security data and alerts, and autonomously investigates multi-vector attack forensics to assure accurate detection and to automate a fast and accurate response.

XDR Revolutionizes Your Security Offering

When joining the SecBI XDR Technology Partnership Program, you benefit from immediate opportunities to open new markets and increase revenue. Our vendor partners offer customers both faster and more accurate threat detection and response, in addition to optimized investments in their existing infrastructure.

Transform your EDR, mail gateway, or web gateway solution into an XDR platform, enabling SOC teams to optimize and automate threat detection, investigation, and response across all attack vectors.

XDR Platform Design

Expand your offering to XDR to:

Expand your business reach

As your offering evolves to a multisource XDR platform, you will open up new markets and expand your customer base. Likewise, every existing installation becomes an opportunity for upsell revenue as you increase the value you bring to your customers' security teams.

Protect your solution investment

Customers who are happy with your best-of-breed solution will be thrilled with your innovative XDR capabilities, as you allow them to continue using the systems they love, while putting all their threat data under a single pane of glass, and automating their ability to analyze and respond.

Catapult to the forefront of cybersecurity

As an XDR innovator, you stay ahead of the competition and make your offering much more attractive to current and new customers.

Together is better:

As an approved SecBI Technology Partner, you benefit from:

- SecBI training
- SecBI support
- Option to "white label" the SecBI XDR platform as part of your brand
- Option for SecBI to promote your product as part of our XDR solution
- Joint marketing and sales opportunities

Easy integration with your security solution:

The SecBI XDR platform integrates easily and quickly with any security solution, enabling an array of cyber data sources to be unified under a single pane of glass. Multiple attack vectors are connected and synchronized by a layer of analytics applied to each log source. The result is end-to-end visibility, fast and accurate threat detection, and automated smart response. With SecBI XDR in your portfolio, security teams can:

- Detect and prioritize stealthy threats
- Automate response without lengthy playbook scripting
- Track threats across any source or location in the organization within moments of a breach before damage occurs
- Investigate faster and respond automatically to drastically reduce mean time to remediation (MTTR)
- Increase SOC productivity by reducing alert backlog, noise and fatigue
- Protect existing security investments
